SUMMARY

Computer Engineering student at the University of Rizal System seeking an OJT/internship in Network Administration, IT Support, or Cybersecurity. Built a home network device monitor and provided IT assistance through the SPES program—troubleshooting hardware/software, maintaining digital records, and supporting office operations. Quick learner committed to applying practical skills to improve network reliability and security.

EDUCATION

University of Rizal System, Antipolo

Bachelor of Science in Computer Engineering

2023 - Present

- Developed skills in network configuration and troubleshooting, network monitoring, embedded system fundamentals, and technical documentation.

TECHNICAL SKILLS

- Networking: TCP/IP, Subnetting, DNS/DHCP, VLANs, Network Device Monitoring, Cisco Packet Tracer, Basic Network Troubleshooting
- Security: Network Security Best Practices
- Tools & Software: MS Office (Word, Excel, PowerPoint), Google Workspace
- Soft Skills: Teamwork, Adaptability, Problem-Solving

PROJECTS

Home Network Device Monitor

- Engineered a single-file Python network monitor (standard library only) that scans the full home subnet via parallel ping sweeps, discovering every connected device in seconds.
- Built a device-approval "stranger alarm" system with real-time Telegram/Discord alerts, providing real-time visibility into connected devices to help identify unauthorized or unrecognized connections.
- Added an internet-outage detector and a SQLite-backed history log that distinguish ISP from local network failures and track each device's uptime, ping, and connection quality (packet loss, jitter) over time.

RFID-Based Automatic Parking Slot System

- Integrated an RFID card reader with a custom-built system (VB.NET, SQL) to enable real-time parking slot detection, attendant alerts, and automated billing.
- Contributed across hardware integration, software logic, and database design — connecting the RFID reader to the application and structuring the SQL database for real-time tracking.
- Collaborated with a team to demonstrate the complete hardware-to-software user flow, from ID scan to slot selection to payment.

EXPERIENCE

Special Program for Employment of Students (SPES)

May 2026

- Provided basic IT assistance and technical support to staff and office operations.
- Assisted with troubleshooting of computer hardware and software issues.
- Assisted in encoding and organizing resident records and maintaining digital files for the barangay office.

HACKATHONS & COMPETITIONS

GCash Hackathon

Sept 2026

- Built, designed and pitched an AI-powered concept to digitize handwritten sales records for small business owners, proposing entry extraction and basic profit/loss summaries to simplify bookkeeping.
- Collaborated with a team of classmates to develop a prototype and present the idea to GCash judges, focusing on accessibility for non-technical users.

CERTIFICATIONS & TRAINING

Google Network Security *Aug 2026*

ORGANIZATIONS

Association of Concerned Computer Engineering Students (ACCESS) Org *2023 to 2024*

- Member, Technical Team — supported technical operations and activities of the organization.
